Outpatient Therapy

Richfield offers outpatient therapy services to residents on our campus, as well as members of all ages and activity levels in the surrounding community. The experienced care team is ready to help you return to work, recreation, home and everything in between.

Our Outpatient Clinic is conveniently located on the first floor of the Richfield Wellness Center. Award-winning services are provided in partnership with Select Rehab, Inc.

Private treatment areas include a warm water therapy pool and a collection of strength/cardio equipment. Our goal is to help individuals to heal and regain their well-being after a specific injury, condition, or setback.

Physical and Occupational Therapy

Physical Therapy is the physical rehabilitation of people recovering from injuries or disease. The goal is to help patients restore mobility, which can minimize the need for expensive surgeries or long-term reliance on medications. Physical therapists also teach patients how to prevent or manage their condition in order to attain long-term health benefits.

Occupational Therapy also considers the physical aspects of rehabilitation and motion, but is focused primarily on enabling the patient to engage in the meaningful activities of daily life. Therapists assist patients through therapeutic adaptations and modifications to their environments.

Speech Therapy

Speech Therapy includes the assessment, diagnosis, treatment, and prevention of disorders related to speaking, swallowing, and communication.
